real world issues can be translated into the language and concepts of mathematics with the use of mathematical models models guided by differential equations with intuitive solutions can be used throughout engineering and the sciences almost any changing system may be described by a set of differential equations they may be found just about anywhere you look in fields including physics

engineering economics sociology biology business healthcare etc the nature of these equations has been investigated by several mathematicians over the course of hundreds of years and consequently numerous effective methods for solving them have been created it is often impractical to find a purely analytical solution to a system described by a differential equation because either the system itself is too complex or the system being described is too vast numerical approaches and computer simulations are especially helpful in such systems the content provided in this book involves real world examples explores research challenges in numerical treatment and demonstrates how to create new numerical methods for resolving problems theories and practical applications in the sciences and engineering are also discussed students of engineering and applied mathematics as well as researchers and engineers who use computers to solve problems numerically or oversee those who do will find this book focusing on advance numerical techniques to solve linear and nonlinear differential equations useful

the central task of all statebuilding is to create a state that is regarded as legitimate by the people over whom it exercises authority this is a necessary condition for stable effective governance states sufficiently motivated to bear the costs of building a state in some distant land are likely to have interests in the future policies of that country and will therefore seek to promote loyal leaders who are sympathetic to their interests and willing to implement their preferred policies in the statebuilder s dilemma david a lake addresses the key tradeoff between legitimacy and loyalty common to all international statebuilding attempts except in rare cases where the policy preferences of the statebuilder and the population of the country whose state is to be built coincide as in the famous success cases of west germany and japan after 1945 promoting a leader who will remain loyal to the statebuilder undermines that leader s legitimacy at home in iraq thrust into a statebuilding role it neither anticipated nor wanted the united states eventually backed nouri al malaki as the most favorable of a bad lot of alternative leaders malaki then used the support of the bush administration to govern as a shiite partisan undermining the statebuilding effort and ultimately leading to the second failure of the iraqi state in 2014 ethiopia faced the same tradeoff in somalia after the rise of a promising but irredentist government in 2006 invading to put its own puppet in power in mogadishu but the resulting government has not been able to build significant local support and legitimacy lake uses these cases to demonstrate that the greater the interests of the statebuilder in the target country the more difficult it is to build a legitimate state that can survive on its own
